

Оглавление (69 записей с № глав и страниц в сборке):

- 1D-3D углеродные наноструктуры для гибких и ультратонких батарей. *Т. Сангави, Н. Понпандиан. 8*
- 1D и 2D углеродные наноструктуры для гибких и ультратонких солнечных элементов. *К.Дипти Джаян. 41*
- 1D–3D углеродные наноструктуры для гибких суперконденсаторов. *А. Раджаприя, С. Киртана, Н. Понпандиан. 80*
- Биосовместимость, токсичность и иммунологические эффекты функционализированных углеродных наноструктур. *Омер Актюрк. 111*
- Биофункционализация углеродных наноструктур. *Доаа Замель, Атта Улла Хан, Сохайла А. Эльмасри, Ахмед С.С. Эльсаид, Сулейман Хан, Мухаммад Алим Ханиф и др. 154*
- Углеродные наностержни, нанопроволоки и нанотрубки. *Сивамаран Венкатесан, Дэвид Иган, Кавимани В., Баласубраманиан В., Гопалакришнан М., Висвабаскаран В. и др. 191*
- Функционализация углеродных наноструктур для применения в области электромагнитной защиты. *Раджеш Каточ, Рам Севак Сингх, Рам Даял Патидар. 234*
- Углеродные наноструктуры для автомобильной и аэрокосмической промышленности. *Мустафа Эрол, Сибель Демироглу Мустафов, Салих Альпер Акалин, Бегюм Узунбайыр, Эрдем Тевфик Оздемир, Беркай Джошкун и др.. 272*
- Углеродные наноструктуры для гибких и легких топливных элементов. *Р. Раджалакими, Н. Понпандиан. 301*
- Функционализация углеродных наноструктур для фильтрации и очистки воздуха. *Виктория Ляпун, Мартин Мотола. 336*
- Функционализация углеродных наноструктур для газоразделительных мембран. *Элис Алекс, Сунши К. Сугунан, Джиджи Джордж. 374*
- Контролируемый синтез углеродных квантовых точек. *Пунам Деви, Лакими Деви, Прити, Рашии Пандир, Анирбан Дас. 411*
- Ковалентная функционализация углеродных наноструктур. *Рахебе Амири Деххаргани. 454*
- Разработка фуллеренов и их производных. *Ручи Бхарти, Аджай Тхакур, Моника Верма, Рену Шарма, Неха Сен. 497*
- Прямое формирование углеродных наноструктур. *Атира Дж. Аджит, Никита Варгезе, Ямуна Наир. 545*
- Экологичный и экологически чистый синтез углеродных наноструктур. *Домингуш Лузитанеу Пьер Макувеле, Умберто Грашер Риэлла, Натан Падоин, Синтия Соарес. 582*
- Электрические и магнитные свойства функционализированных углеродных наноструктур. *Амир Резвани-Могаддам, Захра Ранджбар, Розита Каземи. 615*
- Электрохимический синтез углеродных наноструктур. *М. Ревати, А.Л. Кавита. 657*
- Фуллерен и производные фуллерена для применения в биосенсорстве и медицинской диагностике. *Хильми Дениз Эртугрул Уйгун, Сибель Огузлар, Мерве Зейрек Онгун. 679*
- Функционализированные углеродные наноструктуры на основе металлоорганического каркаса/материалов на основе графена. *Хади Хоссейни. 720*
- Функционализированные углеродные наноструктуры для инженерии костной ткани. *Шубхашири Дас, Бинапани Барик, Гурудутта Паттнаик, Калим Дешмукх, Шриканта Мохарана. 755*
- Функционализированные углеродные наноструктуры для электроанализа. *Масуме Галхани, Сомайе Алимохаммади. 806*
- Функционализированные углеродные наноструктуры для гибкой электроники. *Расул Моради, Назила Пур Халили, Эльмира Ханмамадова, Рашад Абасаде. 839*
- Функционализированные углеродные наноструктуры для задач измерения газа. *Ана Паула де Оливейра Лопес Инасио, Элизер Квадро Орест, Дайана Диас. 873*
- Функционализированные углеродные наноструктуры для хранения водорода. *Сусми Анна Томас, Джаеш Черуссерри, Дипти Н. Раджендран. 911*
- Функционализированные углеродные наноструктуры для медицинской диагностики. *Марзи Рамезани Фарани, Морварид Куххезри, Иман Заре, Марьям Сагат Абтахи, Мохаммад Тавакколи Яраки, Марьям Азарян и др.. 950*
- Функционализированные углеродные наноструктуры для ПОМТЭ. *Асмаа Селим, Ильгар Аюбов, Эмилия Талас, Ирина Борбат, Андраш Томпос. 983*
- Функционализированные углеродные наноструктуры для интеллектуальных устройств биовизуализации. *Расул Моради, Назила Фор Халили, Ваида Алиева. 1036*
- Функционализированные углеродные наноструктуры для умного электронного текстиля. *Клара Р. Перейра, Андре М. Перейра, Жоана С. Тейшейра, Габриэла П. Кейрос, Марта С. Нуньес. 1074*

30. Функционализированные углеродные наноструктуры для интеллектуальных медицинских имплантатов. *Динеш Кумар Шарма, Гурудутта Паттнаик, Амуляратна Бехера, Калим Деשמукх, Шриканта Мохарана.* **1161**
31. Функционализированные углеродные наноструктуры для умной упаковки. *Джаянта К. Сармах, Асадулла Асраф Али, Ракхи Сайкия, Рупа Рани Дей, Рекха Рани Дутта.* **1206**
32. Функционализированные углеродные наноструктуры для адресной доставки лекарств. *Анкита Субхрасмита Гадтья, Калим Деשמукх, Шриканта Мохарана.* **1237**
33. Функционализированные углеродные наноструктуры для очистки сточных вод. *Сусми Анна Томас, Джаеш Черуссери, Дипти Н. Раджендран, Римал Исаак.* **1278**
34. Функционализированные углеродные наноструктуры для опреснения воды. *Махди Ализаде, Нима Аджалли, Абольфазл Гасанзаде, Джафар Азамат.* **1323**
35. Функционализированные углеродные наноструктуры для носимых биосенсоров. *Бабак Эмдади, Расул Моради.* **1361**
36. Функционализированные углеродные наноструктуры для заживления ран. *Бинапани Барик, Гурудутта Паттнаик, Шубхашири Дас, Бхабани Санкар Сатапати, Калим Деשמукх, Шриканта Мохарана.* **1402**
37. Функционализированные углеродные наноструктуры в агропищевом производстве. *П. Раджасекар, В. Тамижинян, С. Арун Кумар.* **1448**
38. Функционализированные углеродные наноструктуры в диагностике и терапии рака. *Прити Куш, Парвин Кумар, Ранджит Сингх.* **1483**
39. Проводящие покрытия на основе функционализированных углеродных наноструктур. *Бибхути Б. Саху, Дебасани Трипатия, Калим Деשמукх, Шриканта Мохарана.* **1523**
40. Газофазная модификация углеродных наноструктур. *Айшвария Джоджи Мэтью, Варша Лиза Джон, Винод Т.П..* **1563**
41. Геометрические и электронные свойства графеновых нанолент. *Анкита Субхрасмита Гадтья, Калим Деשמукх, Шриканта Мохарана.* **1596**
42. Краевые структуры графена: складывание, трубка и скручивание. *Мерве Караман, Эйюп Ялчин, Абдельхалк Абулар, Мустафа Джан.* **1635**
43. Графитовый нитрид углерода и его производные. *Сусми Анна Томас, Джаеш Черуссери, Дипти Н. Раджендран, Р. Саидур.* **1674**
44. Иерархические пористые полые углеродные нановолокна. *Дахиана — Мишель Осорио-Агилар, Эльвия Теран — Сальгадо, Мария-Луиза Гарсия — Бетанкур.* **1712**
45. Полые и плотные (неполые) углеродные наносферы. *Муну Бора, Панкадж Бора, Джьоти Прасад Гогои.* **1752**
46. Промышленное производство, коммерциализация и мировой рынок функционализированных углеродных наноструктур. *Маянк Пунета, джайниш Бхагат, Ракиш Патхак, Шалини Бхатт, Параг Сангхани, Винай Дип Пунета.* **1791**
47. Введение в углеродные наноструктуры: история, классификации и последние достижения. *Мустафа Убенали, Мерием Касбаджи, Мехди Меннани, Мохамед Мбарки, Амин Мубарик.* **1852**
48. Жидкофазные модификации углеродных наноструктур. *Самика Ананд, Р. Мадхушири, К. Р. Сунаджа Деви.* **1906**
49. Низкотемпературный синтез углеродных наноструктур. *Ручи Бхарти, Прия Кошик, Шивани Наик, Аджай Тхакур, Моника Верма, Рену Шарма.* **1943**
50. Механические и барьерные свойства функционализированных углеродных наноструктур. *Сейедараш Хаддади, Саид Гадери, Махмуд Шариятмадар, Нариман Алипана, Бахрам Рамезанзаде.* **1989**
51. Осаждение металлов на углеродные наноструктуры. *Юрий Госвами, Санмилан Джьоти Калита, Рия Дас, Шаивата Пратим Бора, Параса Хазарика, Лакиш Сайкия.* **2040**
52. Наноструктуры и удивительные свойства углеродных нанорогов. *Арти, Намита, Наушад Алам, Джамилур Р. Ансари.* **2081**
53. Физико-химические характеристики функционализированных углеродных наноструктур. *Джайна -Мариэль Пенья- Гарсия, Эльвия Теран -Сальгадо, Мария -Луиза Гарсия -Бетанкур.* **2120**
54. Плазменно-коронная модификация углеродных волокон и углеродных наноструктур. *Ренджит Раджан Пиллаи, Клаудиу Т. Лунгу, Удай Вайдья, Виной Томас.* **2172**
55. Пористые структуры в углеродных гидрогелях и аэрогелях. *Сапна Сетхи, Медха, Свати Тхакур, Бальбир Сингх Кейт.* **2203**
56. Пористые углеродные материалы для очистки воды. *Сельма Хамимед, Абдельвахед Чатти.* **2236**
57. Радиационно-индуцированный синтез углеродных наноструктур. *Саиф Таки, Арифул Хак.* **2283**
58. Управление рисками, нормативные аспекты, экологические проблемы и будущие перспективы функционализированных углеродных наноструктур. *П. Рачита, Нитьяшири Кьятеговдана Лакимана Гауда, Ниджу Сагар, Н. Сунаяна, М. Узма, Винай Б. Рагхавендра.* **2346**
59. Самосборка и дисперсия углеродных наночастиц. *Тахере Ростами Рошан, Хосейн Яхьяи.* **2387**
60. Размерно-зависимые свойства графеновых квантовых точек. *Нирадж Сохал, Банибрата Майты, Сумен Басу.* **2422**
61. Спектроскопические и микроскопические характеристики функционализированных углеродных наноструктур. *Прадик Колхе, Майтри Шах, Сону Ганди.* **2454**

62. Поверхностная прививка углеродных наноструктур. *Шиха Авасти, Суранджан Де, Сарвеш Кумар Пандей*. **2499**
63. Синтез углеродных наноструктур из отходов. *Ван Хазман Даниал*. **2544**
64. Термические и реологические свойства дисперсий углеродных наночастиц. *Беназ Ранджбар, Сахар Форухирад, Захра Ранджбар*. **2582**
65. Двумерный углеродный графдий. *Хумира Асад, Правин Кумар Шарма, Ашиш Кумар*. **2611**
66. Двумерный углеродный графелен. *Эхсан Хаджиалилу, Армин Резанежад, Мухаммад Биал Ханиф, Мартин Мотола*. **2644**
67. Уникальные наноструктуры углеродных нанолуковиц. *Анбу Можу Тамижчелван, Нэйтан Линк*. **2681**
68. Парофазное производство углеродных наноструктур. *Сохейла Шарафиния, Алиморад Рашиди, Бехнам Бабаи*. **2730**
69. Мокрохимический синтез углеродных наноструктур. *Дэцзян Дай, Цзиян Фан*. **2757**

Full contents of the collection from all 69 chapters (# - chapter number)

Ahmed Barhoum, Kalim Deshmukh (eds). Handbook of Functionalized Carbon Nanostructures: From Synthesis Methods to Applications. Springer, 2024. <https://doi.org/10.1007/978-3-031-14955-9> Due: 03 July 2024

#01 1D - 3D Carbon Nanostructures for Flexible and Ultrathin Batteries	8
1 Introduction	9
2 Energy Storage Devices	11
2.1 Batteries and Their Types	11
2.2 Impact of Increased Usage of Batteries	13
2.3 Flexible Batteries	14
2.4 Flexible Electrolytes and Separators	15
2.5 Design of Flexible Batteries	17
2.6 Parameters to Assess Flexible Batteries	17
2.7 Evaluation of Flexibility	19
2.8 Construction of Flexible Batteries	21
2.9 Configuration of Flexible Batteries	23
3 Carbonaceous Materials in Energy Storage	25
3.1 Role of Carbon-Based Nanostructures for Flexible Batteries	25
3.2 One-Dimensional Nanostructure for Flexible Batteries	26
3.3 Two-Dimensional Nanostructure for Flexible Batteries	30
3.4 Three-Dimensional Nanostructure for Flexible Batteries	32
4 Challenges and Future Perspectives	33
4.1 Scalable Synthesis and Integration of the Electrodes	33
4.2 Energy Density and Cyclic Stability	35
5 Conclusion and Outlook	35
Reference	35
#02 1D Versus 2D Carbon Nanostructures for Flexible and Ultrathin Solar Cells	41
1 Introduction	42
2 Flexible and Ultrathin Solar Cells	44
3 Device Architecture of Flexible and Ultrathin Solar Cells	46
4 Classification of Carbon Nanomaterials Based on Dimensionality	47
4.1 Zero-Dimensional (0-D) Carbon Materials	49
4.2 1D Carbon Nanomaterials	49
4.3 2-D Carbon Nanomaterials	49
5 Carbon Nanomaterials for Solar Cells	50
5.1 Fullerene	51
5.2 Carbon Nanotubes	52
5.3 Graphene	53
5.4 Carbon Quantum Dots	55
5.5 Graphene Quantum Dot	56
6 Ultrathin and Flexible Solar Cells	56
6.1 Ultrathin and Flexible Dye-Sensitized Solar Cells	57
6.2 Ultrathin and Flexible Organic Solar Cells	60
6.3 Ultrathin and Flexible Perovskite Solar Cells	60
7 Application of 1D and 2D Carbon Nanostructures in Solar Cells	62
7.1 Ultrathin and Flexible Dye-Sensitized Solar Cells with 1D and 2D Carbon Nanostructures	63
7.2 Ultrathin and Flexible Organic Solar Cells with 1D and 2D Carbon Nanostructures	67
7.3 Ultrathin and Flexible Perovskite Solar Cells with 1D and 2D Carbon Nanostructures	68
8 Challenges and Future Perspectives	70
8.1 Limitations of 1D and 2D Carbon Nanostructures	70

8.2	Challenges Associated with the Flexible and Ultrathin Solar Cell Applications of 1D and 2D Carbon Nanostructures	71
8.3	Outlook on the Future of Carbon Nanomaterials for Flexible and Ultrathin Solar Cells	72
9	Conclusion and Future Prospects	73
	References	73

#03	1D-3D Carbon Nanostructures for Flexible Supercapacitors	80
1	Introduction	81
2	Carbon Nanostructures (1D, 2D, and 3D) in Flexible Supercapacitors	84
3	Energy Storage Mechanism	85
3.1	Electric Double-Layer Capacitors	86
3.2	Pseudocapacitors	86
3.3	Hybrid Capacitors	86
4	Flexible Electrode Material Properties and Modifying Strategies	86
4.1	Flexible Substrates	87
4.2	Carbon-Based Substrates	87
4.3	Textile Substrate	88
4.4	Sponge Substrates	88
4.5	Metal Substrates	89
5	1-D, 2-D, and 3-D Carbon Materials	89
5.1	1D-Carbon Nanostructures for Supercapacitors-Performance of 1D-MWCNT Flexible Supercapacitors	90
5.2	1D- Carbon Nanofibers for Flexible Supercapacitors	92
5.3	2D-Graphene Materials for Flexible Supercapacitors	95
6	3D- Flexible Supercapacitor: 3D Nanocomposite Flexible Electrode	97
6.1	3D Printed Activated Carbon (AC) Electrode for EDLC	98
6.2	3D Carbon-Based Pseudocapacitive Electrode Materials	99
6.3	3D rGO Network on Copper Wire for Flexible Supercapacitor	100
7	Carbon Quantum Dots for Flexible Supercapacitor	102
8	Challenges and Future Perspectives in Flexible Supercapacitors	102
9	Conclusion	104
9.1	Future Outlook on Flexible Supercapacitors	104
	References	105

#04	Biocompatibility, Toxicity, and Immunological Effects of Functionalized Carbon Nanostructures	111
1	Introduction	113
2	In Vitro Biosafety of Functionalized Carbon Nanostructures	116
2.1	Cellular Internalization, Localization, and Trafficking	120
2.2	Cellular Interactions and Cytotoxicity	121
2.3	In Vitro Immunological Effects of Carbon Nanostructures	124
3	In Vivo Biosafety of Functionalized Carbon Nanostructures	128
3.1	Toxicity in Organs	128
3.2	Biodistribution and Accumulation in Organs	131
3.3	In Vivo Immunological Effects of Carbon Nanostructures	134
4	Strategies to Cope with the Toxicity of Carbon Nanostructures	140
5	Conclusion and Future Prospects	141
	References	142

#05	Biofunctionalization of Carbon Nanostructures	154
1	Abbreviations	156
2	Introduction	157
3	Carbon Nanostructures	158
3.1	Carbon Nanotubes	158
3.2	Graphene	163
3.3	Fullerenes	164
3.4	Carbon Dots	166
4	Biofunctionalization Techniques	167
4.1	Covalent Biofunctionalization of Carbon Nanostructures	169
4.2	Noncovalent Biofunctionalization of Carbon Nanostructures	172
5	Applications of Biofunctionalized Carbon Nanostructures	178
5.1	Applications of Biofunctionalized Carbon Nanostructures as Biosensors	178
5.2	Applications of Biofunctionalized Carbon Nanostructures in Tissue Engineering	180
5.3	Applications of Biofunctionalized Carbon Nanostructures in Gene Delivery	181
6	Conclusion and Future Perspectives	183

6.1	Limitations and Considerations in Biofunctionalization	183
6.2	Emerging Trends and Future Directions	183
6.3	Potential Applications and Impact on Various Industries	183
	References	184
#06	Carbon Nanorods, Nanowires, and Nanotubes	191
1	Introduction	193
1.1	Definition of Carbon Nanorods, Nanowires, and Nanotubes	193
1.2	Historical Background and Discovery	196
1.3	Importance of Carbon Nanorods, Nanowires, and Nanotubes in Various Applications	198
2	Synthesis Methods	206
2.1	Carbon Nanotubes	206
2.2	Carbon Nanowires	206
3	Methods	207
3.1	Chemical Vapor Deposition (CVD)	207
3.2	Template-Assisted Method	208
3.3	Vapor-Liquid-Solid (VLS) Method	209
4	There Are Several Methods for Synthesizing Carbon Nanorods, Including	210
4.1	Chemical Vapor Deposition (CVD)	210
4.2	Template Synthesis	210
4.3	Electrospinning	210
4.4	Laser Ablation	211
5	Comparison of Synthesis Methods	212
6	Recent Advancements in Synthesis Techniques	213
7	Properties of Carbon Nanorods, Nanowires, and Nanotubes	214
7.1	Carbon Nanorods	214
7.1.1	Structural Characteristics	214
7.2	Carbon Nanowires	215
8	Properties of Nanotubes	216
8.1	Structural Characteristics	217
8.2	Mechanical Properties	217
8.3	Electrical Properties	217
8.4	Thermal Properties	218
8.5	Optical Properties	218
9	Comparison of Properties Among Different Types of Carbon Nanorods, Nanowires, and Nanotubes	219
10	Applications of Carbon Nanorods, Nanowires, and Nanotubes	220
10.1	Carbon Nanotubes	220
10.2	Carbon Nanorods	221
11	Applications of Nanowires	222
11.1	Electronics and Optoelectronics	222
11.2	Energy Conversion and Storage	222
11.3	Sensing and Detection	223
11.4	Biomedical Applications	223
12	Other Emerging Applications	223
13	Challenges and Future Directions in Applications	224
14	Future Prospects and Opportunities	225
15	Conclusion	227
15.1	Summary of Key Points	227
15.2	Significance and Potential Impact	228
15.3	Opportunities	228
